Lebosol

More than 30 years of experience in plant nutrition

Avitar® – triple effect!

Organic NK fertiliser with anti-stress effect

Composition: 4.1 % total nitrogen (N) 47 g/l, 2.1 % total potassium oxide (K₂O) 24 g/l

Avitar® benefits at a glance:

- ✓ **Best „package“ with amino acids, humic acids, fulvic acids and sea weed extract**
- ✓ **Anti-stress effect under difficult weather situations**
Shield plants from drought, heat or cold
- ✓ **Optimal utilisation of nutrients**
Enhanced efficiency

The effect of Avitar® at a glance:

Amino acids are building blocks of proteins. They increase the stress tolerance of plants and help to speed up recovery time after periods of unfavorable conditions e.g. water stress, drought or cold. In addition, they promote root development, improve nutrient uptake by plants and are important antioxidants in reducing radiation stress.

Increased biomass production

Increased micronutrients mobility in the plant

Humic and fulvic acids are high molecular weight compounds. They improve the nutrient uptake of the plants, increase resistance to abiotic resistance to abiotic stress and promote root growth.

Nutrient uptake improvement

Promotion of root growth

Algae extracts in the chemical sense are complex mixtures of substances: Phytohormones, peptides and polysaccharides. These contribute to the general strengthening of plants, promote metabolic processes, improve stress tolerance and promote root development.

Promotes flowering and improves fruit set

Improvement of fruit quality

Recommendations for the use of Avitar®:

In all crops:

For what? For seed dressing with nutrients for an improved plant development

How often? 0.2 – 0.5 l/dt

When? For seed dressing

Cereals:

For what? Improve nutrient uptake and stress tolerance, N-efficiency, vitality

How often? 2 – 4 times 2 – 4 l/ha

When? From 3-leaf stage

Pome fruit:

For what? Improvement of fruit set and quality, reduction of radiation stress (sunburn)

How often? 3 – 6 times 3 – 5 l/ha

When? From red bud to harvest

Vegetables in general:

For what? Improve nutrient uptake and stress tolerance

How often? 2 – 4 times 3 – 5 l/ha

When? As soon as sufficient leaf mass is developed

Wine grapes:

For what? Flower quality and fruit set, reduction of radiation stress

How often? 3 – 5 times 2 – 4 l/ha

When? From enlarging of inflorescences
